

Aroma Token

Aroma of crypto with less fee

Aroma is a token developed on Web3 of the Polygon (0x) blockchain.

This document describes the definitions and theory behind the aroma explaining the different aspects of the implementation.

Aroma solves the problem of high transaction fees with unique PoT technology.

What is Aroma?

Aroma is a token developed on Web3 of Polygon Blockchain. The source code of Aroma is verified on Polygonscan and it is free to Use & Analyze :

Why Aroma created?

As you know one of the biggest problems of cryptocurrencies is **transaction fees** Aroma will solve that with PoT technology in the easiest way. we are trying to be first one who creates and leads a project to help people and finally goes away from project , as you know after **update No.35** Aroma will fully **Decentralized**.

Who created Aroma?

Our leader know as NoOne created Aroma project He/She is decided to be anonymous until update 35 : fully decentralization.

Why Aroma Tokens contract is just a Copy of existing token source codes?

The working method of Aroma Token is such that the token itself does not need a complex source code and all the work will be done by Aroma Wallet plugins which are completely decentralized.

Why Polygon network?

Polygon believes in Web3 for all. Polygon is a decentralised Ethereum scaling platform that enables developers to build scalable user-friendly dApps with low transaction fees without ever sacrificing on security.

How many Aroma Tokens created?

There is only 10,000,000 ARM and the contract address of Aroma is `0xd3d4faa9d3765497ca6713f5b581a9a6490470b6` , you can find out why there is only 10,000,000 ARM and they will spend in Tokenomics page!

What is PoT?

Literally PoT (Proof of Token) is an algorithm that stakes same amount of DAI (%100) , Matic (%50) and ETH (%50).

Then the reward of staking automatically swaps to Aroma Token and given to you (%10 APY + %1.25 matic as a gift).

The formula of PoT :

X = Holder staking amount in \$

Y = Algorithm stake amount in \$

H = How algorithm stakes

E = Earnings of staking

I = User income

M = Algorithm income

F = Fee decrease uses

$$Y = (2 * X)$$

$$H = 1X \text{ DAI} + 1/2X \text{ Matic} + 1/2X \text{ ETH}$$

$$E \sim \%20X - \%22X$$

$$I = \%10X$$

$$M = E - I - \%50$$

$$F = E - (I + M)$$

PoT is inspired by and uses PoS of ETH layer 2 and MATIC to work too.

What is the point of PoT?

In fact, PoT is the beating heart of the Fee Decrease system and Fee decreasing will not work without PoT.

Tokenomics

Token name : Aroma Token

Symbol : ARM

Supply : 10,000,000

As you can see we spend and share tokens in this way for example :

Airdrop is %10 of all token for 10k people and each participator will receive %0.001 of all tokens in cycle (\$10 +/- \$4.55..5).

They can stake their free tokens with 10% APY and receive rewards as a MATIC each 3 months. (\$0.1 +/- \$0.045 monthly)

ICO is until all 15% got soled and the maximum amount of buying is 10,000 tokens that equals 0.01% of all tokens in cycle (\$100 +/- \$45.5).

In ICO tokens will sale by 55.5% off + %10 APY reward for all tokens in Matic without staking them for 3 months (\$1 +/- \$0.45 monthly).

Fee Decrease

How fee decrease system works?

You can use Fee decrease only if you stake minimum amount of Aroma Tokens in Aroma Wallet.

We use %1.5 ~ %4.09 of staking rewards comes from DAI , MATIC and ETH to decrease the fee amount in our wallet. (%5 of 1.5 ~ 4.09 will use for algorithm's income)

The formula of fee decrease is :

If X = % of fee decrease & Y = Fee amount :

$X = 50\%$ of Y if $Y > \$20$
 $X = 40\%$ of Y if $\$20 > Y > \10
 $X = 30\%$ of Y if $\$10 > Y > \5
 $X = 20\%$ of Y if $\$5 > Y > \2.5
 $X = 10\%$ of Y if $\$2.5 > Y > \1

Example : if you want to send 10\$ of ETH to someone and fee is \$5 we will decrease it to \$3.5.

How many times do I can use Fee Decrease?

X is stake amount and X_{upd} = fee decrease usage per day

If $x \geq \$50$ and $x/50 = \text{int}$

$$x_{upd} = x/50 * 10$$

so if you stake 50\$ Aroma you can use Fee decrease 10 times a day.

Staking

You need stake for using fee decrease system also you can receive %10 APY in MATIC .

With staking you will help ETH and MATIC networks to be faster and secure ; also you will help to environment .

Minimum staking amount is \$50 Aroma Tokens.

We use 15% of tokens for pay staking rewards and after all tokens spent we will use Alternative income from PoT system to pay staking rewards.

Auto Liquidity

We use an algorithm that adds liquidity automatically for token.
It uses %50 of %0.5 trades as liquidity provider and %10 of staking rewards ...

| Liquidity Pools (WMATIC, ARM) | | | | | ^ |
|--|--------|-----|---------|------------|-------|
| All | WMATIC | ARM | TVL | 24H Volume | APY |
|  WMATIC / ARM | | | \$0.209 | \$0.013 | 6.74% |

Why is it important?

This algorithm makes token's trend upward all the time.
